Sequence 1, Application US/09811094

Patent No. US20010044144A1

GENERAL INFORMATION:

APPLICANT: LAVIS, Robert E.

APPLICANT: Davis, Robert E.

APPLICANT: Wiley, Sandra Eileen

APPLICANT: Wiley, Sandra Eileen

APPLICANT: Wiley, Sounitra S.

APPLICANT: Wiley, Sounitra S.

APPLICANT: Hoosh, Sounitra S.

APPLICANT: NOUEL ANT LIGANDS AND SCREENING ASSAYS THEREFOR

FILE OF INVENTION: NOVEL ANT LIGANDS AND SCREENING ASSAYS THEREFOR

CURRENT APPLICATION NUMBER: US/09/811,094

CURRENT APPLICATION NUMBER: US/09/811,094

CURRENT FILENG DATE: 2001-03-14

NUMBER OF SEQ ID NOS: 37

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 894

TYPE: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses a method to produce adenine nucleotide translocator (ANT) proteins or ANT fisal nuclear encoded proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of inner mitochondrial membrane. It mediates transport of adenosine di/tri-phosphates across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability transition pore, a modulator of apoptosis. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to detect or isolate ANT in a biological sample, and therapeutically for regulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial function, including Alzheimer's, Parkinson's and Huntington's diseases, cancer, psoriasis, diabetes, dystonia, cheber's hereditary optic neuropathy, schizophrenia, mitochondrial encephalopathy, lactic acidosis and stroke (MELAS), hyperproliferative disorders, mitochondrial diabetes and deafness (MIDD), and myoclonic epilepsy red ragged fibre syndrome. The present sequence is an analyse adenine nucleotide translocator ANT3 from human brain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAI88642-AAI42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                    (ANT-3) protein. ANT proteins are mitochondrial permeability

C transition (MTP) pore components responsible for mediating transport

C of ADP across the mitochondrial inner membrane. ANT proteins interact

c with other mitochondrial core components e.g. cyclophilins to

c regulate MFT. The present invention relates to a novel nucleic acid

c expression construct comprising a promoter operably linked to a

c polynucleotide encoding a mitochondrial pore component polypeptide

c (e.g. ANT) fused to an energy transfer molecule (ETM) protein

c (e.g. ANT) fused to an energy transfer molecule (ETM) protein

c (e.g. ANT) fused to an energy transfer molecule (ETM) protein

c (e.g. The methods are useful for a fitochondrial membrane permeability

transition and/or alter the interaction between mitochondrial core

components. The methods are useful for screening for agents that alter

c MPT and/or cell survival. These agents are useful for the prevention or

c dysfunctional cell survival, such as Alzheimer's disease, diabetes

mellitus, Parkinson's disease, Huntington's disease, schizophrenia,

mitochondrial encephalopathy, lactic acidosis, stroke,

c mellitaratare a career and desfore
                                                                                                                                            Query Match
                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents human adenine nucleotide translocator-3 (ANT-3) protein. ANT proteins are mitochondrial permeability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid expression constructs, useful for screening for agents that alter mitochondrial permeability transition (MPT), comprises polynuclectide encoding MPT polypeptide or cyclophilin polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mitochondrial permeability transition mitochondrial core component; mitochon

The invention relates to a recombinant expression construct (I) comprising a regulated promoter operably linked to a nucleic acid encoding an adenine nucleotide translocator (ANT) polypeptide. ANT proteins mediate the exchange of ATP synthesised in the mitochondrial matrix for ADP in the cytosol. (I) is useful for producing recombinant ANT polypeptide by transforming a prokaryotic or eukaryotic host cell and culturing the host cell. (I) is also useful for targeting a polypeptide of interest to a mitochondrial membrane, where ANT polypeptide is expressed as a fusion protein with the polypeptide ANT cuseful for identifying an agent that binds to an ANT polypeptide. ANT ligand is useful for determining the presence of an ANT polypeptide, is useful for identifying an agent that binds to an ANT polypeptide, preferably ANT1, ANT2 or ANT3 in a biological sample and for isolating the presence of an ANT polypeptide. ANT covalently bound to a solid phase. Detectably labeled ANT ligand is acvalently or non-cuseful for identifying an agent that interacts with an ANT polypeptide. The present sequence represents the amino acid sequence of human ANT3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel recombinant expression construct translocator polypeptides, comprises a nucleic acid encoding the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; adenine nucleotide translocator; ANT;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathles and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method of identifying a candidate insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent-biased activity of the assay system. The method is useful for identifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM protein described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 160-161; 232pp; English.

(ANT) proteins or ANT fusion proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of constructs. ANT is a nuclear encoded protein and a major component of cinner mitochondrial membrane. It mediates transport of adenosine constructs are across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability corresponds to protests. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to cregulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial pore activity, for treating diseases associated with altered mitochondrial pore activity, for treating diseases associated with altered mitochondrial pore activity, for treating diseases associated continuity of diseases, cancer, psoriasis, diabetes, dystonia, cleber's hereditary optic neuropathy, schizophrenia, mitochondrial cencephalopathy, lactic acidosis and stroke (MELAS), hyperproliferative consequence, is an interesting diseases and deafness (MIDD), and myoclonic epilepsy red ragged fibre syndrome. The present sequence is an according nucleotide translocator ANT2 from human brain.
                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
The present sequence represents human adenine nucleotide translocator-2 (ANT-2) protein. ANT proteins are mitochondrial permeability transition (MTP) pore components responsible for mediating transport of ADP across the mitochondrial inner membrane. ANT proteins interact vith other mitochondrial core components e.g. cyclophilins to regulate MFT. The present invention relates to a novel nucleic acid components of the present invention relates to a novel nucleic acid components expression construct comprising a promoter operably linked to a polynucleotide encoding a mitochondrial pore component polypeptide (e.g. ANT) fused to an energy transfer molecule (ETM) protein fluorescent protein (GFP) or a FLASH sequence). The novel expression construct can alter mitochondrial membrane permeability transition and/or alter the interaction between mitochondrial core components. The methods are useful for screening for agents that alter MFT and/or cell survival. These agents are useful for the prevention or dysfunctional cell survival. Such as Albeimer's disease, diabetes compliants, Parkinson's disease, Huntington's disease, schizophrenia, complete the provential encephalopathy, lactic acidosis, stroke,
                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid expression constructs, useful for screening for agents that alter mitochondrial permeability transition (MPT), comprises polynucleotide encoding MPT polypeptide or cyclophilin polypeptide fused to energy transfer molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mitochondrial mitochondrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAU01199 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0;
```

The invention relates to a recombinant expression construct (I) comprising a regulated promoter operably linked to a nuclaic acid encoding an adenine nucleotide translocator (ANT) polypeptide. ANT proteins mediate the exchange of ATP synthesised in the mitochondrial matrix for ADP in the cytosol. (I) is useful for producing recombinant ANT polypeptide by transforming a prokaryotic or eukaryotic host cell culturing the host cell. (I) is also useful for targeting a polypeptide

a polypeptide

Novel human diagnostic and therapeutic polypeptide useful for identifying test compound which specifically binds to a polyencoded by human diagnostic and therapeutic polynucleotide, induce antibodies useful for ៥

N-PSDB; ACC46652

Claim 27; SEQ 日 No 1250; 591pp; English.

CC proteins; microarrays comprising dithp nucleic acid sequences; methods of detecting dithp nucleotide and protein sequences; methods of for compounds which specifically bind a DITHP protein; and methods of CC assessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP proteins may be used in the CC diagnosis of a wide variety of conditions including cancer and other cell CC proliferative disorders; autoimmune or inflammatory disorders; bacterial, CC viral, fungal or parasitic infections; hormonal disorders; metabolic CC disorders; neurological disorders; gastrointestinal disorders; transport CC disorders; neurological disorders; gastrointestinal disorders; transport CC screen for modulators of protein activity or gene expression. DITHP CC proteins can additionally be used in analysis of the proteome of a tissue CC rell type and to induce antibodies. The dithp nucleic acids are CC additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of continued antimal models of human disease or knock in human disease or knock in the present sequence represents a DITHP protein which is an organelle-cassociated protein. associated protein.

Note: The sequence data for this patent did no specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences. The invention relates to novel human diagnostic and therapeutic polynucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP; ABR41136-ABR41812). The invention also relates to polynucleotide sequences at least 90% identical to the dithp cDNA sequences of the invention; recombinant vectors, host cells and transgenic organisms comprising a dithp nucleic acid sequence; the recombinant production of DITHP proteins; antibodies specific for DITHP not form part of the directly fro from WIPO

                                                                                                                                                                                                                                 The present sequence is the mouse Antl protein, the cDNA producing this polypeptide is cloned by screening a mouse heart cDNA library with the human Antl cDNA as a probe. The Antl cDNA sequence was determined by DNA Tag dideoxy terminator cycle sequencing. The Antl protein is encoded by the Antl locus, a nuclear gene on chromosome 8. This protein is required in mitochondrial oxidative phosphorylation (OXPHOS), as it imports Any which can then be converted into ATP. An Antl homozygous mutant would thus be defective in OXPHOS which results in disease in oxidative metabolism dependent tissues. This mouse Antl homozygous mutant can be used as a model system for fascioscapular humeral muscular dystrophy, hypertrophic cardiomyopathy, myopathy, lactic acidosis, etc. These model systems can be used to test possible therapeutic compounds which increase/mediate ATP and ADP exchange across the mitochondrial membrane independent of ATP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mice lacking heart-muscle adenine nucleotide translocator protein useful as model for mitochondrial myopathy and hypertrophic cardiomyopathy in animals and to test therapeutic compositions or gene therapies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antl; Adenine nucleotide translocator; cloning; screening; DNA Taq dideoxy terminator cycle sequencing; oxidative phosphorylation; probe; OXPHOS; mitochondria; ADP; ATP; homozygous mutant; myopathy; hypertrophic cardiomyopathy; fascioscapular humeral muscular dystrophy; lactic acidosis; degenerative muscle disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                    This invention describes novel polynucleotides and polypeptides isolated from human cDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention.

                    The patent discloses a method to produce adenine nucleotide translocator (ANT) proteins or ANT fusion proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of inner mitochondrial membrane. It mediates transport of adenosine di/tri-phosphates across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability transition pore, a modulator of apoptosis. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to detect or isolate ANT in a biological sample, and therapeutically for regulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial function, including Alzheimer's, Parkinson's and Huntington's diseases, cancer, psoriasis, diabetes, dystonia, leber's hereditary optic neuropathy, schizophrenia, mitochondrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antipsoriatic; cerebroprotective; therapeutic; screening; psoriasis; Alzheimer's disease; Parkinson's disease; Huntington's disease; dyst diabetes; Leber's hereditary optic neuropathy; schizophrenia; MELAS; mitochondrial encephalopathy; lactic acidosis; stroke; MIDD; mitochondrial diabetes and deafness; hyperproliferative disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant construct encoding adenine polypeptide, useful e.g. in screening f against mitochondrial disease

ANT proteins interact CC with other mitochondrial core components e.g. cyclophilins to CC expression construct comprising a promoter operably linked to a collectide encoding a mitochondrial pore component polypeptide CC (e.g. ANT) fused to an energy transfer molecule (ETM) protein CC (e.g. ANT) fused to an energy transfer molecule (ETM) protein CC (e.g. ANT) fused to an energy transfer molecule (ETM) protein CC (e.g. Green flourescent protein (GTP) or a FLASH sequence). The novel CC transition and/or alter the interaction between mitochondrial core CC treatment of diseases associated with altered mitochondrial membrane prevention or CC (HPT and/or cell survival. These agents are useful for the prevention or CC (HPT and/or cell survival, such as Alzheimer's disease, diabetes CC (dysfunctional cell survival, such as Alzheimer's disease, diabetes anticohondrial encephalopathy, lactic acidosis, stroke, hyperproliferative disorders e.g. cancer, and deafness.

The invention relates to a recombinant expression construct (I) comprising a regulated promoter operably linked to a nucleic acid (CC encoding an adenine nucleotide translocator (ANT) polypeptide. ANT (CC entries mediate the exchange of ANT synthesised in the mitochondrial (CC entries for ADP in the cytosol. (I) is useful for producing recombinant (CC aNT polypeptide by transforming a prokaryotic on eukaryotic host cell and (CC culturing the host cell. (I) is also useful for targeting a polypeptide (CC expressed as a fusion protein with the polypeptide of interest to a mitochondrial membrane, where ANT polypeptide. Is (CC expressed as a fusion protein with the polypeptide of interest. (CC expressed as a fusion protein with the polypeptide of interest. (CC expressed as a fusion protein with the polypeptide of interest. (CC expressed as a fusion protein with the polypeptide of interest. (CC expressed as a fusion protein with the polypeptide. ANT (CC expressed) and for determining the presence of an ANT polypeptide. ANT (CC expressed) ANTI, ANTO or ANTS in a biological sample and for isolating (CC expressed) and to a solid phase. Detectably labeled ANT ligand is also (CC expressed) and the polypeptide of covalently bound to a solid phase. Detectably labeled ANT ligand is also (CC expressed) and the polypeptide of the present sequence represents the amino acid sequence of human ANTI.
                                                                                                                                                                                                                                                                                                                δÃ

C;Comment: This protein is synthesized in the cytosol and transported into the m C;Complex: homodimer C;Complex: homodimer C;Function:

A;Description: catalyzes the exchange between cytosolic ADP and mitochondrial AT A;Note: located in the inner mitochondrial membrane C;Superfamily: ADP,ATP carrier protein; ADP,ATP carrier protein repeat homology C;Keywords: acetylated amino end; duplication; homodimer; methylated amino acid; F;5-99/Domain: ADP,ATP carrier protein repeat homology <ACP1>F;110-202/Domain: ADP,ATP carrier protein repeat homology <ACP2>F;110-203/Domain: ADP,ATP carrier protein repeat homology <ACP3>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C;Species: Bos primigenius taurus (cattle)

S51132

ADP, ATP carrier protein - malaria parasite (Plasmodium falciparum)

ADP, ATP carrier protein - malaria parasite (Plasmodium falciparum)

N;Alternate names: ADP/ATP transporter

C;Species: Plasmodium falciparum
C;Date: 07-May-1955 #sequence_revision 01-Sep-1995 #text_change 09-Jun-2000
C;Accession: $68993; S51132
